## Abstracts

According to our (Global Info Research) latest study, the global Commercial Webcam market size was valued at US\$ 590 million in 2025 and is forecast to a readjusted size of US\$ 804 million by 2032 with a CAGR of 4.6% during review period.

A webcam is a camera that transmits or streams images or videos in real time to or through a computer network (such as the Internet). Webcams are typically small cameras placed on a desktop, connected to a user's monitor, or built into hardware. Webcams can be used during video chat sessions involving two or more people, where the conversation includes real-time audio and video. The maximum resolution of a webcam is also lower than that of most handheld cameras, because higher resolutions are degraded during transmission. According to the resolution type, this article is mainly divided into: 720P, 1080P, 2K, 4K. The pixels in 720P are 1280\*720, that is, 1280 pixels are arranged horizontally and 720 pixels are arranged vertically. It is often called high-definition resolution. The resolution of 1080P is 1920 \* 1080, and this resolution is often called full high-definition resolution. The resolution of 2K is 2048\*1080 or 2560\*1440, and this resolution is called 2K. The resolution of 4K is 4096\*2160, and the term for 4K is ultra-high definition.

Since 2020, as the COVID-19 pandemic continues to spread around the world, the demand for commercial webcams for remote office, remote education, online live broadcasting, etc. has grown rapidly. In 2022, due to the end of the epidemic prevention policy, the market demand for commercial webcams began to decline. In 2024, the global commercial webcam market size reached US\$ 590 million and is expected to reach US\$ 756 million in 2031, with a compound annual growth rate (CAGR) of 4.7%. In terms of consumption, Asia Pacific is currently the world's largest consumer

market, followed by North America and Europe.
