## **Abstracts**

According to our (Global Info Research) latest study, the global Commodity/Energy Trading, Transaction, and Risk Management (CTRM/ETRM) Software market size was valued at US\$ 283 million in 2025 and is forecast to a readjusted size of US\$ 383 million by 2032 with a CAGR of 4.1% during review period.

Commodity/energy trading, transaction, and risk management (CTRM/ETRM) software manages all activities related to the buying and selling of commodities such as oil, grains, metals, and other refined products. CTRM/ETRM helps companies plan when to buy or sell commodities, track pricing, and the volumes of commodities processed. Since commodities are traded on platforms similar to a stock exchange, their prices fluctuate, and companies need to manage the risk of losing money. This type of software is mostly used for procurement professionals who need to purchase raw materials and other commodities that their company needs to function. CTRM/ETRM can be integrated with accounting software and ERP systems to manage the financial aspects of trading. Integration with supply chain suites is also required to track the demand for commodities and inventory availability.

The CTRM/ETRM (Commodity/Energy Trading, Transaction, and Risk Management) software market is currently experiencing continuous expansion driven by digital transformation and the growth of global trading. The market focus is shifting from traditional desktop and localized systems to cloud-native, modular, and end-to-end solutions, emphasizing unified management of real-time trading, price risk, credit and market risk, as well as pricing, hedging, and compliance tracking capabilities for

complex derivatives and cross-market portfolios. Supply chain volatility, energy market price volatility, and carbon emissions and sustainability compliance requirements are driving increased demand for stronger data visibility, automated workflows, and seamless integration with market data, accounting, and clearing systems. Challenges include the high cost of system migration, data quality and consistency, cross-regional regulatory compliance, and balancing agile development with operational efficiency.
