Abstracts

According to our (Global Info Research) latest study, the global Common Film Glue market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Common film glue is a specially formulated coating used to protect circuit boards and related equipment from environmental erosion, thereby improving and prolonging their service life and ensuring the safety and reliability of use. Under realistic conditions, such as chemical, vibration, high dust, salt spray, humidity and high temperature environments, circuit boards may have corrosion, softening, deformation, mildew and other problems, resulting in circuit board circuit failures. The three-proof paint is coated on the surface of the circuit board to form a layer of three-proof protective film (three-proof refers to moisture-proof, salt spray and mildew-proof). It can effectively isolate the circuit board and protect the circuit from erosion and damage in harsh environments, thereby improving the reliability of the circuit board, increasing its safety factor, and ensuring its service life.
