## Abstracts

According to our (Global Info Research) latest study, the global Common Mode Chokes market size was valued at USD 668.5 million in 2023 and is forecast to a readjusted size of USD 916.7 million by 2030 with a CAGR of 4.6% during review period.

Common Mode Chokes, as the name implies, are designed to attenuate and filter common mode noise within an electric system. It's a passive device consisting of two wire coils wound on a magnetic core that block (choke) signals common to both lines in the device while being a low impedance to signals that are unique to one line or the other in the device. Common mode relates to both wires being wound as coils on the core. Due to the transformer-like coupling effects that occur in such a configuration, a common mode choke passes through differential signals or signals that are the same amplitude but opposite polarity, but choke common mode signals. Common mode signals are signals that appear on both inputs or outputs simultaneously of the same level and polarity, like electromagnetic interference (EMI). Such signals will cancel each other out in this configuration.

Global core common mode chokes players include Murata, TDK and Chilisin etc. The top 3 companies hold a share about 41%. Asia Pacific is the largest market, with a share about 57%, followed by North America and Europe with the share about 15% and 11%.

In terms of product, SMD common mode choke is the largest segment, with a share about 84%. And in terms of sales channels, the largest application is communication?with a share about 35%.
