According to our (Global Info Research) latest study, the global Common Mode Filter Choke market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The principle of Common Mode Filter Choke is that the magnetic flux in the magnetic ring is superimposed on each other when flowing through the common-mode current, so that it has a considerable inductance, which suppresses the common-mode current, and when the two coils flow through the differential-mode current, the magnetic flux in the magnetic ring cancels each other and has almost no inductance, so the differential-mode current can pass through without attenuation. Therefore, the common-mode inductor can effectively suppress the common-mode interference signal in the balanced line, and has no effect on the differential mode signal transmitted normally by the line.
