## Abstracts

According to our (Global Info Research) latest study, the global Common Mode Inductor market size was valued at USD 690.4 million in 2023 and is forecast to a readjusted size of USD 933.4 million by 2030 with a CAGR of 4.4% during review period.

Common Mode Inductor is an inductor device used to suppress common mode noise and interference in circuits. It usually consists of a pair of coils and is used to treat two wires in a circuit at the same time to prevent common-mode signals (signals that appear on both wires at the same time) from propagating. Common mode inductors are widely used in electromagnetic interference (EMI) and radio frequency (RF) filtering, communication equipment, power line filters, and various electronic equipment. With the increase in 5G communications and high-frequency RF applications, common-mode inductors need to operate in a higher frequency range, so higher frequency response and lower losses will be required. Advances in materials science and manufacturing technology will improve the performance of common-mode inductors, including increased inductance, lower resistance, and improved temperature stability.

The Global Info Research report includes an overview of the development of the Common Mode Inductor industry chain, the market status of Consumer Electronics (SMD Common Mode Inductor, Through Hole Common Mode Inductor), Communication (SMD Common Mode Inductor, Through Hole Common Mode Inductor), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Common Mode Inductor.
