According to our (Global Info Research) latest study, the global Common Rail Direct Injection System (CRDi) market size was valued at US\$ 736 million in 2024 and is forecast to a readjusted size of USD 1164 million by 2031 with a CAGR of 6.7% during review period.

The Common Rail Direct Injection (CRDi) system is an advanced fuel injection technology used in modern diesel engines to enhance performance, efficiency, and emissions control. It separates fuel pressure generation from the actual injection process, maintaining a high-pressure reservoir (common rail) that supplies fuel to injectors at precise timings and quantities. Controlled by an electronic control unit (ECU), CRDi adjusts injection parameters based on engine conditions, ensuring optimal combustion, better fuel economy, reduced noise, and lower emissions. Widely adopted in automotive and industrial applications, it represents a significant improvement over older mechanical injection systems.
