In 2025, global production of communication energy storage battery packs reached 770.8 megawatts, with an average selling price of US$150 per kilowatt. In 2025, global production capacity for communication energy storage battery packs was approximately 1,200 megawatts, with a gross margin of about 25.2%. A communication energy storage battery pack is an energy storage device specifically designed for communication systems, providing power supply and voltage stabilization for communication equipment, especially in applications such as base stations and data centers. Such battery packs can store electrical energy and provide temporary power support during insufficient power supply or power outages, ensuring the continuity and stability of communication systems. The upstream of communication energy storage battery packs includes cathode and anode materials, electrolytes, and separators. The midstream consists of communication energy storage battery pack manufacturers, while the downstream is primarily applied in base stations, data centers, and other fields.

Currently, the market for communication energy storage battery packs is showing a steady growth trend. Benefiting from the continuous upgrading of global communication infrastructure, the large?scale deployment of 5G networks, and the rising demand for electricity in data centers, the demand for highly reliable, long?life backup power and energy storage systems in this field is growing increasingly strong. At the technical level, products are evolving toward higher energy density, lighter weight, intelligent
