## Abstracts

According to our (Global Info Research) latest study, the global Commutator market size was valued at USD 1751.3 million in 2023 and is forecast to a readjusted size of USD 2605.2 million by 2030 with a CAGR of 5.8% during review period.

A commutator is the moving part of a rotary electrical switch in certain types of electric motors and electrical generators that periodically reverses the current direction between the rotor and the external circuit. It consists of a cylinder composed of multiple metal contact segments on the rotating armature of the machine. Two or more stationary electrical contacts called 'brushes' made of a soft conductor like carbon press against the commutator, making sliding contact with successive segments of the commutator as it rotates. The windings (coils of wire) on the armature are connected to the commutator segments.
