The global Compact AC Reduction Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Compact AC reduction motor is a kind of motor. Its design is more energy-saving and compact than traditional AC motor. The motor is designed for a wide range of applications where size and energy efficiency are very important, such as electric vehicles, household appliances and industrial equipment. The compact AC reduction motor uses a permanent magnet rotor and a stator with multiple coils to generate a magnetic field that drives the rotation of the motor shaft. This design allows for more efficient use of electrical energy, because the motor can operate at a higher efficiency level with less energy loss.
