A Compact Antenna Test Range (CATR) system is a specialized testing setup used for evaluating the performance of antennas in a controlled environment. It simulates far-field conditions within a compact indoor space by utilizing a parabolic reflector to convert spherical waves into plane waves, enabling accurate measurements of antenna characteristics such as gain, radiation patterns, and beamwidth. CATR systems are ideal for testing high-frequency antennas, including those used in satellites, radar, and wireless communication devices. They offer precise, repeatable results while reducing the need for large outdoor test ranges, making them a critical tool in aerospace, defense, and telecommunications industries for antenna development and validation.
