According to our latest research, the global Compact ASP Sewage Treatment Plants market size will reach USD 1143 million in 2031, growing at a CAGR of 4.0% over the analysis period.

Compact ASP sewage treatment plants are small-scale facilities utilizing the Activated Sludge Process (ASP), suitable for communities, Small business projects, or remote areas. This technology employs microorganisms to break down organic pollutants, converting wastewater into effluent that meets discharge or reuse standards. Its space-saving design is ideal for land-scarce regions, while modular features allow for easy expansion or relocation. The treatment process includes primary sedimentation, biological reaction, and secondary sedimentation, with advanced models optionally equipped with UV disinfection or membrane filtration to enhance output quality. These plants offer high automation, low energy consumption, and simplified maintenance, effectively addressing decentralized sewage treatment needs. Moreover, they reduce pollution in natural water bodies, supporting ecological conservation and water recycling.
