Abstracts

The global Compact Autocorrelator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An autocorrelator is used to measure the pulse duration. The basic principle is to use a beam splitter to create two copies of the incoming beam. These copies are superimposed in a nonlinear medium, where they interact to produce a third beam. Since the overlap of the two copies depends on the pulse duration, analysis of the third beam allows calculation of the pulse duration. The compact autocorrelator is very compact and very easy to use. Measure in just two minutes!

This report studies the global Compact Autocorrelator production, demand, key manufacturers, and key regions.
