A Compact High Temperature Filter is a specialized air filtration device engineered to operate in environments with elevated temperatures, typically ranging from 250°C to 700°C, without compromising structural integrity or filtration efficiency. These filters are compact in size, making them ideal for installations where space is limited, while still offering high performance in removing fine particulates, dust, smoke, and airborne contaminants. Constructed from heat-resistant materials such as stainless steel housings, metal separators, and high-temperature fiberglass or ceramic filter media, compact high temperature filters maintain dimensional stability and filtration efficiency even under extreme thermal stress. They are designed with deep-pleated configurations or mini-pleats to maximize surface area within a limited volume, enabling both low pressure drop and long service life.
