The global Compact Low Temperature Attenuator market size is expected to reach \$ 1014.6 million by 2029, rising at a market growth of 9.8% CAGR during the forecast period (2023-2029).

An attenuator is an electronic component that provides attenuation and is widely used in electronic equipment. Its main purpose is: (1) to adjust the size of the signal in the circuit; (2) in the comparison method measurement circuit, it can be used for direct reading The attenuation value of the network under test; (3) Improving impedance matching. If some circuits require a relatively stable load impedance, an attenuator can be inserted between this circuit and the actual load impedance to buffer impedance changes.
