According to our (Global Info Research) latest study, the global Compaction Equipment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Compaction equipment is used to compress and/or compact different types of materials at a work site. In construction sites different tools and machines are used for different purposes, such as waste around the work area is compacted and then disposed or loose soil around the work site is compacted before the start of the actual construction work.

While compaction equipment is mostly used to compress loose soil, but owing to a variety of compaction equipment available today, this equipment has found way in all types of construction activities, right from building roads to constructing industrial complexes. This equipment can compress loose soil, rocks, landfill debris, road surfaces and other materials to a particular density levels, so that the ground does not cave with use or over a period of time.

In US?Compaction Equipment key players include BOMAG, Caterpillar, Volvo, Atlas, Ammann, etc. The top five manufacturers hold a share over 45%.

Northeast is the largest market, with a share over 35%, followed by Midwest and South, both have a share over 45%.

In terms of product, Light Compaction Machines is the largest segment, with a share over 85%. And in terms of application, the largest application is City Public Works,
