Abstracts

Compaction equipment is used to compress and/or compact different types of materials at a work site. In construction sites different tools and machines are used for different purposes, such as waste around the work area is compacted and then disposed or loose soil around the work site is compacted before the start of the actual construction work.

While compaction equipment is mostly used to compress loose soil, but owing to a variety of compaction equipment available today, this equipment has found way in all types of construction activities, right from building roads to constructing industrial complexes. This equipment can compress loose soil, rocks, landfill debris, road surfaces and other materials to a particular density levels, so that the ground does not cave with use or over a period of time.
