Abstracts

Competitive pipes are manufactured using several materials out of which steel is the most preferred, owing to its inherent properties such as tensile strength, compressive strength, durability, and anti-rust properties. A rapidly increasing demand for steel pipes from end-use industries such as the oil & gas industry especially for applications such as exploration, drilling, and transportation is expected to bolster market growth to a great extent. The other segments by material type namely copper, concrete, aluminum, ductile iron.

SCOPE OF THE REPORT:

This report focuses on the Competitive Pipes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. While the other segments are nowhere close to steel in terms of market share and volume consumption, concrete stands out next in line to steel as the preferred material for the manufacturing of competitive pipes. The concrete segment in the global competitive pipes market is anticipated to witness steady revenue growth throughout the forecast period. Revenue growth of the concrete segment can be attributed to rising demand from the water and waste water management system. Increasing government investments for infrastructure development is another factor that is anticipated to drive the demand for concrete pipes during the forecast period.

The worldwide market for Competitive Pipes is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
