## **Abstracts**

Complement is the group of serum glycoprotein, the part of innate immune system that enhances the ability of antibodies and macrophages to clear the damaged cells and pathogens. Complement also promotes inflammation and aids in enhancing the immune response. The complement system is activated through a cascade. Complement deficiency is a primary immunodeficiency disorder. Deficiency in any component of complement can lead to immunosuppression, infections and sepsis. Clinical indication for complement deficiency include bacterial infection, autoimmune disease or episodes of angioedema. The deficiency can be either inherited or acquired, also it can be either complete or partial. One can screen the complement deficiency using different diagnosis test such as by performing the total serum complement classic hemolytic complement test or alternative hemolytic complement test.
