According to our (Global Info Research) latest study, the global Complement Inhibitors market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Complement inhibitors are a class of drugs designed to block the activation of the complement system, a key part of the immune response that, when overactivated, can cause tissue damage. These inhibitors target specific complement proteins to prevent the cascade of reactions that leads to inflammation and cell destruction. By controlling this process, complement inhibitors are used to treat a variety of complement-mediated disorders, including paroxysmal nocturnal hemoglobinuria (PNH), atypical hemolytic uremic syndrome (aHUS), neuromyelitis optica spectrum disorder (NMOSD), and geographic atrophy (GA) in age-related macular degeneration (AMD).
