According to our (Global Info Research) latest study, the global Complex Injectable market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Complex injectable are designed to infuse drug through a hollow needle and a syringe which is penetrated through the skin into the body. Complex injectable market is gaining traction in the injectable therapies/infusion treatment owing to increase in use in life-threatening and chronic diseases treatments. The manufacturing of the complex injectable products is extremely complex and requires major investment. Since the injectables are highly toxic and infectious in nature, therefore a great level observation of quality and care is required during their manufacturing, packaging, distribution and storage.

Market for complex injectable is primarily driven by the rising incidence of chronic diseases, increase in the demand for self-injection devices, technological advancements challenges, stability of the product when combined with other products, growth of biologics market, preference of other modes of drug delivery.
