Composite Drug Packaging Rigid Films are specialized multilayered materials designed to provide enhanced protection for pharmaceutical products. These films typically consist of various polymers, such as polyethylene (PE), polypropylene (PP), or polyvinyl chloride (PVC), combined with barrier layers like aluminum foil or ethylene vinyl alcohol (EVOH) to ensure high impermeability against moisture, oxygen, and other external factors. Their rigid nature offers structural integrity, making them suitable for applications such as blister packs, strip packs, and other pharmaceutical packaging formats. The composite structure optimizes functionality by integrating mechanical strength, chemical resistance, and ease of thermoforming, ensuring the safe storage and extended shelf life of medications.
