Major downstream customers include Vestas, Siemens Gamesa, TPI Composites, LM Wind Power, Exel Composites, and others.

Composite Epoxy System refers to a complete resin system formulated with epoxy resin as the primary matrix and combined with curing agents, accelerators, reactive diluents, toughening agents, fillers, and other functional additives according to the requirements of composite molding processes and final product performance. Compared with conventional base epoxy resins, these products are generally optimized in terms of viscosity, pot life, curing temperature, curing speed, exothermic behavior, fiber wettability, mechanical properties, heat resistance, and fatigue resistance, and can be directly used with reinforcing materials such as glass fiber, carbon fiber, and aramid

fiber for the production of composite materials. Based on different molding processes, the main product types include vacuum infusion epoxy systems, resin transfer molding epoxy systems, pultrusion epoxy systems, filament winding epoxy systems, laminating and hand lay-up epoxy systems, prepreg epoxy systems, and compression molding epoxy systems. They are widely used in wind turbine blades, automotive lightweight components, aerospace structural components, high-pressure hydrogen storage cylinders, composite pipes, marine applications, rail transit, construction reinforcement materials, sporting goods, and other fields. The key competitive advantages of these products mainly lie in the compatibility between the resin system and reinforcing fibers, adaptability to different molding processes, curing efficiency, and the strength, toughness, heat resistance, and long-term reliability of the resulting composite materials.
