## Abstracts

The global Composite Inorganic Pigments market size is expected to reach \$ 887.3 million by 2029, rising at a market growth of 5.2% CAGR during the forecast period (2023-2029).

Complex Inorganic Colour Pigments (CICP) is crystallized color compound in solid solution produced by the calcination of two or more kinds of metal oxides including, Co, Cr, Fe or such transition metal element(s) at a very high temperature. It is also called calcined pigment or mixed metal oxides (MMO). CICP has a stable crystalline structure of rutile or spinel which provides outstanding properties, particularly heat resistance, weatherability and chemical resistance. CICP is widely used as colorants for paints and coatings, plastics, ceramics etc.
