According to our (Global Info Research) latest study, the global Composite Material for Battery Enclosures market size was valued at US\$ 341 million in 2025 and is forecast to a readjusted size of US\$ 623 million by 2032 with a CAGR of 9.1% during review period.

In 2025, global Composite Material for Battery Enclosures production reached approximately 55.1 K Tons, with an average global market price of around 6014 USD per Ton.

Composite Material for Battery Enclosures refers to a high-performance structural material specifically designed for the top cover, lower box, or protective structure of power battery packs in new energy vehicles. It is made of resin as the matrix and glass fiber/carbon fiber as the reinforcing material. It has the characteristics of lightweight, high strength, high modulus, flame retardancy, heat insulation, insulation and corrosion resistance, and easy molding of large-size parts. It can replace the traditional metal shell to achieve weight reduction and energy saving, while meeting the automotive-grade safety requirements such as battery pack sealing and protection, shock resistance, and suppression of thermal runaway propagation. It is a key material for achieving lightweight and safety upgrades of power battery systems.

With its core advantages of being lightweight yet high-strength, flame-retardant, heat-insulating, insulating, and corrosion-resistant, BPC precisely addresses the industry pain points of traditional metal casings: heavy weight, susceptibility to corrosion, insufficient impact resistance, and difficulty in meeting the demands of thermal runaway protection and integrated molding in battery packs. It solves both range anxiety and

battery safety hazards in EVs, adapts to the development needs of integrated battery pack structures, and balances environmental friendliness and life-cycle economics. It fills the performance gap of traditional materials in automotive-grade battery protection, becoming a core alternative to metal casings.

The upstream raw materials for Composite Material for Battery Enclosures mainly fall into three categories: resin matrix, reinforcing fiber, and functional additives. Typical suppliers include Huntsman, Dow, BASF, Evonik, Solvay, Teijin, etc. Downstream users are mainly battery manufacturers and battery pack manufacturers, with typical users including CATL, BYD, etc.

The production capacity of a single production line for Composite Material for Battery Enclosures varies greatly depending on the molding process, product size and structural complexity, and the level of equipment automation. The industry gross profit margin is usually in the range of 20%-30%.
