Abstracts

According to our (Global Info Research) latest study, the global Composite Material Cage market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

In 2024, global composite material cage production reached approximately 0.41 million units, with an average global market price of around US\$ 2,650 per unit.

The gross profit margin of major companies in the industry is between 52% ? 70%.

In 2024, the global production capacity of composite material cages was approximately 0.54 million units.

A composite material cage is an interbody fusion implant made from reinforced polymer composites, offering radiolucency, high strength, and biocompatibility for spinal fusion procedures. It provides structural support, promotes bone ingrowth, and reduces imaging interference compared with metal cages.

The industrial chain includes upstream suppliers of PEEK polymers, carbon fiber reinforcements, surface coating materials, and precision machining tools. The midstream consists of medical implant manufacturers responsible for molding, machining, surface texturing, sterilization, and quality validation. Downstream applications include spinal fusion surgeries in hospitals, orthopedic centers, and neurosurgical departments.
