## Abstracts

The global Composite Material Molding Machine market size is expected to reach \$ 3345 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of composite material molding machines reached 5,800 units, with an average selling price of US\$320,000. Composite material molding machines are specialized equipment used to manufacture high-performance composite material products, widely applied in aerospace, automotive, wind power, sporting goods, and construction industries. They utilize processes such as hot pressing, cold pressing, vacuum molding, and injection molding to combine resin with fiber-reinforcing materials (such as carbon fiber and glass fiber) through various molding methods, producing lightweight, high-strength, and highly corrosion-resistant composite materials. Its upstream raw materials mainly include resin, fiber, hardener, and filler. On average, a single unit of equipment consumes 300 kg of carbon fiber, 500 kg of resin, and 60 kg of hardener. Downstream, it mainly supplies automobile manufacturers, aerospace companies, wind power equipment manufacturers, and composite material component manufacturers. Among them, automobiles account for 40%, aerospace for 30%, wind power for 15%, and other industrial applications for 15%. The global total production capacity is approximately 7,500 units per year, with an industry gross profit margin of approximately 30%-40%. In terms of downstream consumption, automobile and aerospace demand accounts for 60%, while wind power and other industrial demand account for 40%. The future lies in upgrading towards automation, intelligence, and green environmental protection, in line with the trend of lightweighting, to promote the widespread application of composite materials in new energy vehicles, 3D printing, and high-end equipment. With the advancement of global environmental regulations, the demand for composite materials continues to expand, and the market has broad growth
