According to our (Global Info Research) latest study, the global Composite Material Solar Mounting System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Composite photovoltaic mounting system(bracket) is a material composed of high-performance fibers such as glass fiber and carbon fiber and a resin matrix. Compared with traditional steel photovoltaic brackets, composite photovoltaic brackets have higher strength, lower weight and better corrosion resistance, so they show greater stability and durability under extreme climate conditions. In extreme high-temperature environments, composite photovoltaic brackets can effectively resist thermal expansion and maintain structural stability.
