According to our (Global Info Research) latest study, the global Composite Premix for Larval Shrimp and Crab market size was valued at US\$ 178 million in 2025 and is forecast to a readjusted size of US\$ 252 million by 2032 with a CAGR of 4.8% during review period.

In 2025, global production of Composite Premix for Larval Shrimp and Crab reached approximately 80650 metric tons, with an average selling price of around USD 2,150 per ton. Composite premix for shrimp and crab is a functional aquafeed intermediate product formulated on the basis of vitamin and mineral premixes, further incorporating amino acids, immune-modulating components, gut health factors, anti-stress substances, and selected functional additives. It is specifically designed to address the requirements of crustacean species under high-density farming conditions, including precision nutrition, health management, and disease resistance enhancement. Typically applied at low inclusion rates in shrimp and crab compound feeds, this type of premix plays an important role in improving survival rates, stabilizing production performance, and reducing systemic farming risks.

Currently, the Composite Premix for Larval Shrimp and Crab market remains relatively small in scale but highly specialized, with demand concentrated in high-value crustacean species such as shrimp. Market conditions indicate that supply is dominated by mid-to-large aquafeed producers and specialized premix suppliers, while downstream customers place strong emphasis on formulation suitability, batch consistency, and on-farm performance rather than price alone. In terms of development trends, the industry is gradually shifting from nutrition-oriented solutions toward health-management-driven formulations, with composite premixes increasingly serving

preventive and stress-management functions within feed programs. Market perspectives suggest that although large-scale expansion is constrained by farming cycles and regional disease risks, the market maintains a foundation for steady, structural growth driven by higher stocking densities and increased penetration of premium feed formulations.
