According to our (Global Info Research) latest study, the global Composite Scale and Corrosion Inhibitor market size was valued at US\$ 440 million in 2025 and is forecast to a readjusted size of US\$ 633 million by 2032 with a CAGR of 5.0% during review period.

In 2025, the global production of composite scale and corrosion inhibitors reached 213,600 tons, with an average selling price of US\$2,000 per ton. The global annual production capacity of composite scale and corrosion inhibitors is approximately 400,000 tons, with a gross profit margin of approximately 21.5%. Composite scale and corrosion inhibitors are a class of agents used in water treatment systems, combining the functions of scale inhibition and corrosion inhibition. They aim to prevent scale buildup in water systems, reduce metal corrosion, and extend equipment life. They typically consist of multiple components that work synergistically to achieve a comprehensive effect, rather than a single component performing all functions. The upstream of the composite scale and corrosion inhibitor industry chain includes carboxylic acids, corrosion inhibitor monomers, and chelating agents; the midstream consists of composite scale and corrosion inhibitor manufacturers; and the downstream mainly includes the water treatment and environmental protection industries.

This report is a detailed and comprehensive analysis for global Composite Scale and Corrosion Inhibitor market.
