According to our (Global Info Research) latest study, the global Composite Self-lubricated Bearing market size was valued at US\$ 3837 million in 2024 and is forecast to a readjusted size of USD 6259 million by 2031 with a CAGR of 7.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Composite Self-lubricated Bearing is an advanced and innovative type of bearing. It is fabricated by combining multiple materials with distinct properties. The matrix material provides excellent load-bearing capacity, while the incorporated additives or lubricating phases endow it with self-lubricating characteristics. During operation, it doesn't require additional lubricating oil or grease. Thanks to its internal special lubricating components, it can effectively reduce the friction coefficient and minimize wear. Even under extreme conditions such as high speed, heavy load, low temperature, or vacuum, it can maintain a stable working state, which significantly extends its service life and cuts down maintenance costs.
