Abstracts

According to our (Global Info Research) latest study, the global Composite Steel Grating market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Composite steel grating is a kind of plate-like material with many spaces, which is made of glass fiber as reinforcing material and unsaturated polyester resin as matrix through special processing. Composite steel grating can be used as structural material. Used as floors, trench covers, platforms, ship decks, stairs, planks, etc. in corrosive environments.

The emergence of composite steel grating has brought great convenience to people. Composite steel grating has strong corrosion resistance, anti-magnetic insulation, natural anti-theft, weather resistance, load-bearing, portability, manufacturability and ease of cutting, etc. Fully complement the deficiencies and shortcomings of steel grating. Therefore, where the composite steel grating has many obvious advantages and can meet the environmental requirements, it gradually replaces the steel grating and maximizes its role. Such as marine areas, hot and humid areas prone to rust, high altitude dew areas, areas prone to corrosion, such as electroplating plants, chemical plants, cooling towers, wharf projects, power plants and sewage treatment plants, etc.

Composite steel grating is also called composite floor grid, which is a glass fiber reinforced plastic product refined by special process with unsaturated polyester resin as the matrix, alkali-free glass fiber as the reinforcement material. It can be used as a structural material for floors, platforms, ship decks, building planks, etc. with corrosive
