Abstracts

The global Compostable Toothbrush market size is expected to reach \$ 135 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

In 2025, global production of compostable toothbrushes reached 73 million units, with an estimated average selling price of US\$1.04 per brush. Compostable toothbrushes are manual toothbrush products made with materials such as bamboo, wood, PLA/PBS, recycled paper packaging, or plant-based bristles, with the aim of reducing the environmental impact of traditional plastic toothbrushes. Its upstream includes bamboo, beech wood, corn starch-based/PLA/PBS resin, plant-based nylon, traditional nylon/PBT bristles, paper boxes/bags/kraft paper packaging, inks, adhesives, and injection molding, bamboo and wood processing, bristle implantation, rounding, and packaging equipment; the midstream includes handle molding, bristle implantation, surface treatment, packaging, and brand/OEM customization; the downstream covers individual consumers, eco-friendly retail brands, hotel groups, homestays, air travel supplies, dental clinics, e-commerce platforms, and corporate bulk purchasing. Gross profit margin is approximately 25%-45%.

Globally, growth is primarily driven by the large volume of traditional plastic toothbrush waste. Hotels and retail channels in the EU, UK, Australia, North America, and parts of Asia are continuously promoting plastic reduction, with hotel and travel supplies shifting from plastic toothbrushes to bamboo handles, paper packaging, and on-demand delivery models. Eco-friendly lifestyle brands, e-commerce platforms, and chain retailers are bundling bamboo toothbrushes, toothpaste tablets, and refillable oral care kits, shifting the competition from single toothbrush products to 'low-plastic oral care solutions.'
