Abstracts

The global Compound Carbide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Duplex carbide is an important raw material in the production of cemented carbide. It is a solid solution of WC dissolved in TiC or WC dissolved in TiC-TaC (NbC) at high temperature. It has good oxidation resistance. Duplex carbides containing TaC have good high-temperature hardness and can improve the life of continuous cutting tools. Adding complex carbides to cemented carbide can not only improve the oxidation resistance of the alloy, but also improve the ability of alloy tools to resist crater wear and edge edge, which is an important way to change the properties of cemented carbide. Commonly used compound carbides are composed of binary or multiple solid solutions composed of WC, TiC, TaC, etc., commonly known as CK materials.

This report studies the global Compound Carbide production, demand, key manufacturers, and key regions.
