## Abstracts

According to our (Global Info Research) latest study, the global Compound Enzymes for Meat Poultry market size was valued at US\$ 213 million in 2025 and is forecast to a readjusted size of US\$ 326 million by 2032 with a CAGR of 6.2% during review period.

In 2025, the global sales volume of compound enzymes for meat poultry reached 11,200 tons, with an average selling price of \$18,500 per ton; total production capacity stood at approximately 15,000 tons per year, while gross margins remained within the range of 32% to 38%. This product consists primarily of a blend of various enzyme preparations—including amylase, protease, cellulase, and phytase—designed to enhance the digestibility of meat poultry feed, improve nutrient absorption efficiency, and promote growth performance.

Upstream raw materials include enzyme-rich fermentation broths derived from microbial fermentation, as well as stabilizers, carriers, and anti-caking agents; downstream, the product is supplied primarily to commercial broiler, meat duck, and layer chicken farms, as well as to animal feed manufacturers.

Driven by the global trend toward large-scale, intensive livestock farming and the growing imperative to control feed costs, market demand for compound enzymes for meat poultry continues to rise. This sector presents significant commercial opportunities—particularly in terms of improving feed conversion ratios, reducing environmental emissions, and enhancing animal health. Moving forward, market competitiveness and profitability can be further bolstered through R&D focused on developing highly thermostable, high-efficiency, and multifunctional compound enzyme products, as well as by providing customized solutions tailored to meet the specific

requirements of diverse farming environments and feed formulations.
