The compound eye camera is a compound eye camera system based on bionic compound eye imaging technology. Bionic compound eye imaging technology is a new imaging technology developed based on the imaging principle of insect eyes (compound eyes). It can realize a variety of functions such as large field of view imaging, depth estimation, and three-dimensional imaging. Compared with traditional cameras based on optical imaging technology, it has the characteristics of ultra-large field of view, ultra-high sensitivity, ultra-high pixel resolution, and support for panoramic video retracing. The compound eye camera has a wide range of application scenarios and can be used in open-pit mines, commanding heights of urban roads, entrances and exits of key units, stadiums, shooting ranges, parks, airports, military facilities and other scenarios.
