According to our (Global Info Research) latest study, the global Compound Laser market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The composite laser adopts fiber laser and semiconductor laser as the composite light source. Through the composite welding head, the two lasers can act on the workpiece together. It has excellent welding quality and speed, high adaptability to the working environment, and the photoelectric efficiency is over 30%. The maximum photoelectric efficiency reaches more than 40%, the uniformity of the spot is good, and the energy distribution of the flat-top beam is presented. The low-power semiconductor is suitable for the application of soldering and plastic welding, and the high-power semiconductor is suitable for direct laser welding of thin materials such as stainless steel and carbon steel.
