Compound Rotor Centrifuge is a device that uses the principle of centrifugal force to separate substances. It uses the strong centrifugal force generated by the high-speed rotating rotor to accelerate the sedimentation rate of particles in the liquid, thereby separating substances with different sedimentation coefficients and buoyancy densities in the sample. The compound rotor centrifuge has a compound rotor design, timing function, high efficiency and energy saving, and is easy to operate. It is widely used in chemical, pharmaceutical, biotechnology and other fields.
