Abstracts

The global Compound Weave Conveyor Belts market size is expected to reach \$ 1003 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Composite braided conveyor belts are industrial conveyor belts made by combining various weaving methods and materials (such as stainless steel, carbon steel, or synthetic fibers) to achieve enhanced strength, durability, and flexibility. They are widely used in metallurgy, food processing, chemical, and manufacturing industries for material conveying, cooling, drying, or baking processes, and are particularly suitable for high-load or high-temperature applications. The composite braided conveyor belt industry chain includes upstream metal wires, synthetic fibers, adhesives, and surface treatment materials; midstream processes such as wire drawing, weaving, composite lamination, heat treatment, conveyor belt assembly, and surface treatment; and downstream applications covering food processing plants, metallurgical operations, industrial manufacturing, and special material conveying systems, providing installation, maintenance, and repair services to ensure stable performance and service life. In 2025, the global production of composite braided conveyor belts was approximately 22.67 million square meters, with a global average market price of approximately US\$30 per square meter. The gross profit margin of major companies in the industry is between 25% and 40%. In 2025, the global production capacity of composite braided conveyor belts was approximately 28 million square meters.
