## Abstracts

According to our (Global Info Research) latest study, the global Compounding Pharmacy market size was valued at USD 11900 million in 2023 and is forecast to a readjusted size of USD 14230 million by 2030 with a CAGR of 2.6% during review period.

The traditional role of compounding pharmacies is to make drugs prescribed by doctors for specific patients with needs that can't be met by commercially available drugs. For example:

A young child may need a small, liquid dose of a drug made only in adult-dosage tablets.

A person may be allergic to one of the ingredients in the commercial version of a drug.

A compounding pharmacy would make the proper dosage and form of the drug without any offending ingredients.

Compounded medications are made based on a practitioner's prescription in which individual ingredients are mixed together in the exact strength and dosage form required by the patient. This method allows the compounding pharmacist to work with the patient and the prescriber to customize a medication to meet the patient's specific needs.

Global Compounding Pharmacy key players include Fagron, Wedgewood Pharmacy, CAPS, Fresenius Kabi, Advanced Pharma, etc. Global top five manufacturers hold a share nearly 5%.
