A comprehensive environmental test system refers to testing equipment within a chamber capable of simultaneously or sequentially applying multiple environmental stresses to a product according to a set program. These environmental stresses primarily include temperature, humidity, vibration, rain, icing, wind, fog, solar radiation, and more. By simulating the various complex and combined environments that a product encounters during actual storage, transportation, and use, the system examines the product's reliability, durability, and performance stability. The main components involved in this equipment include an environmental simulation chamber (usually equipped with observation windows), temperature/humidity control systems, vibration generation systems, control systems, and so forth.
