The comprehensive processing solution for precision gears is a systematic service model integrating process plans, machining equipment, tooling, automated material handling, inspection systems, and information management software. Distinct from the sale of standalone equipment, this approach centers on advanced CNC machine tools to establish end-to-end production capabilities for customers?spanning gear blank turning, gear cutting (hobbing, shaping, and shaving), and heat treatment, through to face and bore grinding, gear grinding, and finishing. Its core value lies in achieving the intelligent and digital transformation of the production process through the integration of fully automated material handling, in-line inspection systems, and supporting manufacturing execution systems (such as GearMES), ultimately helping customers significantly boost production efficiency (e.g., by over 55%) and reduce energy consumption.
