Also known as sand blasting, air blasting utilizes specific air blasting equipment that works by using compressed air to propel various types of abrasive materials onto a surface under high pressure. This typically is used as a way to smooth out a rough surface or even roughen up a smooth surface. With the various sizes of abrasive you can use with air blasting equipment, you can achieve numerous rough or smooth results. Some materials used as an abrasive within our sandblasting equipment include metal shot/grit, aluminum oxide, glass bead, engineered abrasive compounds, starches and baking soda, and sometimes even crushed nut shells.
