According to our (Global Info Research) latest study, the global Compressed Air Dusters market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Compressed air dusters, also known as compressed air cans, air dusters, or computer dusters, are products used for cleaning delicate or sensitive equipment and surfaces by spraying a stream of compressed air. These dusters typically come in a can or container that holds a liquefied gas, often compressed air or a propellant like difluoroethane or tetrafluoroethane.

Compressed air dusters are commonly used to clean electronic devices such as computers, laptops, keyboards, printers, cameras, and other equipment. The high-pressure air helps remove dust, debris, and particles from hard-to-reach areas without damaging the delicate components.

Besides electronics, compressed air dusters are also useful for cleaning optics, camera lenses, musical instruments, air filters, sewing machines, and various household items.
