## Abstracts

The global Compressed Air Dusters market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Compressed air dusters, also known as compressed air cans, air dusters, or computer dusters, are products used for cleaning delicate or sensitive equipment and surfaces by spraying a stream of compressed air. These dusters typically come in a can or container that holds a liquefied gas, often compressed air or a propellant like difluoroethane or tetrafluoroethane.

Compressed air dusters are commonly used to clean electronic devices such as computers, laptops, keyboards, printers, cameras, and other equipment. The high-pressure air helps remove dust, debris, and particles from hard-to-reach areas without damaging the delicate components.

Besides electronics, compressed air dusters are also useful for cleaning optics, camera lenses, musical instruments, air filters, sewing machines, and various household items.

This report studies the global Compressed Air Dusters production, demand, key manufacturers, and key regions.
