According to our (Global Info Research) latest study, the global Compressed Air Post Cooler market size was valued at US\$ 1372 million in 2024 and is forecast to a readjusted size of USD 2009 million by 2031 with a CAGR of 5.9% during review period.

The atmosphere contains a certain amount of water vapor, and after compression, the humidity will increase significantly. To ensure the efficient operation of compressed air equipment, it is critical to maintain a dry environment. In view of this situation, an effective solution is to use an air compressor aftercooler. The device prevents moisture buildup in the compressor piping system by cooling the hot compressed air and removing condensation at the same time.
