## Abstracts

According to our (Global Info Research) latest study, the global Compressed Asbestos Fibre Jointing Material market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Compressed asbestos fibre (CAF) jointing material is a gasket material made from asbestos fibers combined with a variety of binders such as rubber or other elastomers, which are compressed to form dense sheets. Known for its excellent heat, chemical, and pressure resistance, CAF was widely used in industrial applications such as sealing flanges, pipes, and machinery in sectors like power generation, petrochemical, automotive, and marine industries. The material's high durability and ability to withstand extreme temperatures, chemical exposure, and mechanical stress made it ideal for creating gaskets and seals used in harsh environments. However, due to the health hazards associated with asbestos exposure, including respiratory diseases and cancer, the use of CAF has significantly declined, with many countries imposing strict regulations or outright bans on asbestos-containing products. Today, non-asbestos alternatives are more commonly used, although in some regions CAF may still be employed in legacy equipment or specialized applications where replacement is not feasible. CAF remains an important material historically in industrial sealing technology, but its use is increasingly rare due to the global shift towards safer and more sustainable materials.
