According to our (Global Info Research) latest study, the global Compressed Natural Gas market size was valued at USD 41440 million in 2023 and is forecast to a readjusted size of USD 60490 million by 2030 with a CAGR of 5.6% during review period.

Compressed natural gas (CNG) (methane stored at high pressure) is a fuel which can be used in place of gasoline , diesel fuel and propane/LPG. CNG combustion produces fewer undesirable gases than the fuels mentioned above. It is safer than other fuels in the event of a spill, because natural gas is lighter than air and disperses quickly when released. Biomethane - cleaned up biogas from anaerobic digestion or landfills - can be used.

In recent years, the share of natural gas in the global energy mix has drastically increased. The compressed natural gas (CNG) is used widely in heavy duty transportation vehicles due to affordability and eco-friendliness. With the rise in the environmental issues such as climatic changes and depleting ozone layer many nations across the globe have started using CNG in power production.

The Global Info Research report includes an overview of the development of the Compressed Natural Gas industry chain, the market status of Light Duty Vehicles (Associated Gas, Non-Associated Gas), Medium Duty/Heavy Duty Buses (Associated Gas, Non-Associated Gas), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Compressed Natural Gas.
