Abstracts

A compressed oxygen self-rescuer is a self-rescuing device for an isolated closed-circuit rebreathing system. In fact, it is a small oxygen breathing apparatus, and its oxygen comes from the high-pressure oxygen cylinder in the self-rescuer, thus overcoming the shortcomings of the chemical oxygen self-rescuer, which causes the inhalation temperature to rise too quickly due to the chemical reaction and can only be used once. . It has the advantages of small size, light weight, easy to carry, comfortable to wear, simple operation, and reusability. Mainly used in coal mines or normal atmospheric pressure operating environment when toxic and harmful gas outbursts and hypoxia suffocation disasters occur.

This report studies the global Compressed Oxygen Self Rescuer production, demand, key manufacturers, and key regions.
