According to our (Global Info Research) latest study, the global Compressible Sugar market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Sugar is a non-reducing disaccharide, which is present almost in all components, especially spermatophytes. Major production of sugar in the industry is from sugar cane and sugar beet and minor production from other sources like sorghum. Compressible sugar is a sugar that contains most parts sucrose and some parts of other ingredient such as starch, invert sugar or maltodextrin. Sucrose has a poor compactability and hence used in modified form, that has better compactability. Compressible sugar is used as an excipients in pharmaceutical and other industries. The sugar-based excipients are accepted widely for their safety and pleasant taste notes. Compressible sugars are used in tablets, lozenges to give a sweet taste and mouthfeel.
